IMPORTANT RESOURCES

March signals the start of spring and brings out the birds and bees. In many regions, tree blossoms begin to break and early flowers start showing off. Native bees, hatching from their cocoons, emerge in search of native nectar, pollen, and nesting sites and migrating birds are searching for vital recharging stations. With native plants filling your gardens, these resources are nearby and abundant.

This spring:

- [Pitch in a patch for pollinators.](#)
- [Bee in love, breakup with your lawn.](#)
- [Pick natives over nativars.](#)
